

Clinlab, Inc

The Clinlab Difference

Not all lab systems are the same. We excel in a number of vital areas that make a big difference in the ease of use and needed capabilities of the modern lab.

Interfaces

All Clinlab instrument interfaces are automatic and real time. There is no manual selecting, downloading, or uploading by a tech and we support auto-validation on many of our interfaces.

EMR Packages Interface (Optional)

Clinlab interfaces to the majority of the most popular systems. Your results can go directly into your EMR for an improved patient record and to fulfill the upcoming requirements placed upon practices by the federal government.

Web Order Entry/View Results (Optional)

Our web outreach capabilities are comparable to external systems costing 10 times more and are completely integrated into your laboratory system. The package contains result graphing, history, and cumulative capabilities.

Report Routing (Included)

Our software will automatically route reports to the appropriate physicians and additional locations can be added on the fly at order entry time. No longer will additional copies have to be manually printed and sent to a 3rd or 4th provider. Any report can be printed or faxed automatically to an unlimited number of destinations.

Expedite Printing (Included)

Our Expedite printing system delivers the report as the instant results are completed and approved by your technologists.

Test Aliasing and Insurance Routing (Included)

Are you tired of manually determining where to send a sample based on the patient's insurance? You will no longer need to do that with our routing system. When you order a test, the system takes a generic name, then translates it based on the insurance requirements and routes it to the appropriate lab as required by the patient's insurance.

Result Entry (Included)

In addition to results being automatically entered into Clinlab by the instrument interfaces, we also support data entry with validation and two forms of advanced delta checking. Results can be entered by sample number, patient lookup, and programmed Work Chart. Answers are colorized white, yellow or red to quickly inform your techs of critical values.

Clinlab, Inc

In addition, we support one result to multiple samples for batching results that would normally be tedious work, now simplified (e.g. result the following test for samples marked as NEGATIVE)

Table Driven to be Flexible (Included)

Almost all of Clinlab is table driven. That means you pick the options you want to use and the selections that apply to your lab. You no longer have to pick through phrases, comments or test that just do not apply to your lab. You can also add any new ones that come up.

Predetermination of Benefits (Included)

Clinlab verifies tests ordered against a medical necessity database to ensure the patient is authorized for the testing based on the diagnosis given. If not, then the system prints an ABN form in English or Spanish for the patient to sign.

Quality Control (Included)

Clinab supports the Westgard Rules validation of Quality Control samples and allows for the creation of your own standards when needed.

Security (Included)

We offer 9 levels of menu access security, tied in with test view level security. In addition users can be restricted access to patient records based on provider and/or location.

Reporting (Included)

Patient reports can be completely customized to your needs. We have completed reports varying from a standard single page report to color 3 page health fair reports that even suggest ways to improve your health. Capabilities are limited only by your imagination. We utilize an ad-hoc report generation system that allow you to write your own reports that can be customized to your needs.

Recent Draws (Included)

When ordering tests on a patient, a list of all recent collections are displayed on screen to help you identify duplicate orders and/or testing that may be more frequent that allowed by insurance carriers.

Easy Lookup system. (Included)

Lookups in Clinab are easy, simply start typing the patient number or patient name in the lookup window. The system automatically finds matches as you type and allows you to quickly select the patient or data you are looking for without typing entire names or numbers.

Automated Interfaces to Reference Labs (Optional)

Clinlab supports interfaces to all major reference labs and can provide an interface to any system with that capability. These can be “order and results” or “results only”.
